

## Networking & Content Delivery

## Amazon CloudFront

Securely deliver content with low latency and high transfer speeds

Amazon CloudFront is a fast content delivery network (CDN) service that securely delivers data, videos, applications, and APIs to customers globally with low latency and high transfer speeds.

**Get started with CloudFront**

Enable accelerated, reliable and secure content delivery for Amazon S3 buckets, Application Load Balancers, Amazon API Gateway APIs, and more in 5 minutes or less.

### Create a CloudFront distribution

## AWS Free Tier

1 TB of data transfer out

10,000,000 HTTP or HTTPS requests

2,000,000 CloudFront Function  
invocations

Each month, always free

**Pricing (US)**

First 1 TB data transfer free each month

|                |                     |
|----------------|---------------------|
| 10 TB/month    | \$0.085 per GB      |
| HTTP requests  | \$0.0075 per 10,000 |
| HTTPS requests | \$0.0100 per 10,000 |

## Benefits and features

## Reduce latency

The CloudFront network has 225+ points of presence (PoPs) that are connected by fully redundant, parallel 100 GbE fiber delivering ultra-low latency performance and high availability to your end users. CloudFront automatically maps network conditions and intelligently routes your user's traffic when serving up cached or dynamic content.

## Cut costs

Integrated with AWS, using CloudFront consolidates requests and removes data transfer out fees from your AWS origins. CloudFront offers customizable pricing options including simple pay-as-you-go pricing with no upfront fees and the CloudFront Security Savings Bundle that helps save up to an additional 30%.

### Improve security

Use CloudFront for perimeter protection, traffic encryption, and access controls. AWS Shield Standard defends traffic transmitted through CloudFront from DDoS attacks at no additional charge. For application protection, you can integrate AWS WAF, managed rules, and managed third-party firewall options into CloudFront workloads.

### Customize delivery

Serverless compute features enable you to securely run your own code at the AWS CDN edge. Customize your delivery to overcome the unique challenges your business faces, creating your own balance between cost, performance, and security.

### Create distribution

### Origin

**Origin domain**

Choose an AWS origin, or enter your origin's domain name. [Learn more](#)

Q Choose origin

**Amazon S3**

bucket-01-25-11-2024.s3.amazonaws.com

► **Additional settings**

## Default cache behavior

► Additional settings

Function associations - optional [info](#)

Choose an edge function to associate with this cache behavior, and the CloudFront event that invokes the function.

|                 | Function type  | Function ARN / Name | Include body |
|-----------------|----------------|---------------------|--------------|
| Viewer request  | No association |                     |              |
| Viewer response | No association |                     |              |
| Origin request  | No association |                     |              |
| Origin response | No association |                     |              |

Web Application Firewall (WAF) [info](#)

☐ Enable security protections

Keep your application secure from the most common web threats and security vulnerabilities using AWS WAF. Blocked requests are stopped before they reach your web servers.

☒ Do not enable security protections

Select this option if your application does not need security protections from AWS WAF.

CloudFront > Distributions > E38Q5P8P6U56A

Introducing the CloudFront Security Dashboard

The new security tab is a unified place to configure, manage, and monitor security for your CloudFront distribution. The built-in dashboard gives you visibility into top security trends, allowed and blocked traffic, as well as visibility and controls for bots. CloudFront geographic restrictions are now part of the security dashboard.

Successfully created new distribution.

To get in-depth monitoring information for your distribution's internet traffic, [create an Internet Monitor](#).
